PROFESSIONAL SUMMARY

Final-year Computer Science student (Data Science specialisation) at Albukhary International University, expected to graduate November 2026, with six months of full-time experience as an Algorithm Engineer & Analyst owning authentication and backend systems in a live production environment. Comfortable across Python, SQL, and modern web/backend frameworks, with hands-on exposure to data analysis, API integration, and collaborative software development. Complements this technical foundation with proven administrative leadership, having coordinated a 500+ member international student body. Seeking entry-level opportunities in software development, data analysis, or technical/operations roles.

TECHNICAL SKILLS

- Languages: Python, SQL, Java, C
- Web & Backend: React, HTML, CSS, JavaScript, Django, FastAPI, REST APIs
- Data & Databases: PostgreSQL, Supabase, Excel, Power BI, Tableau, Matplotlib, Seaborn
- Tools & Practices: Visual Studio Code, Git/GitHub, Claude AI (AI-assisted development), authentication systems (JWT/JWKS), API integration, technical documentation, collaborative/team-based development

PROFESSIONAL EXPERIENCE

Algorithm Engineer & Analyst — R&D Frontier Program — The Genuine Brands Sdn. Bhd.

6 Apr 2026 – 6 Oct 2026 (6 months, full-time)

- Owned and maintained the company's shared identity and authentication service used across its digital product ecosystem — migrated the login system to a secure JWKS/EdDSA-based signing architecture, implemented real email verification, and resolved data-security advisories to protect user records.
- Took ownership of core authentication and infrastructure work on the company's HR platform, which connects employers with job applicants — migrated file storage, resolved cross-platform deployment issues between the frontend and backend hosting services, and redesigned several user-facing pages including the dashboard, applicant tracking, and login flow.
- Integrated AI-assisted features, including automated cover-letter generation and a support chatbot, to improve the platform's user experience.
- Built and delivered a branded web-based assessment tool for an external industry partner, including a complete, ready-to-deploy package and supporting documentation.
- Contributed, as part of a cross-functional development team, to the frontend build of a new product within the company's ecosystem, integrating the authentication system into the new platform.
- Supported deployment and maintenance of additional company digital products and contributed to ecosystem-wide security and performance improvements.
- Prepared and submitted structured weekly progress reports to the project director and maintained technical documentation throughout the placement.

SELECTED TECHNICAL PROJECTS

Django Inventory Management Backend — Personal Project

- Built a Django-based backend modelling customers, orders, and products for store inventory management, with structured database relationships and a working CRUD workflow.

Credit Card Fraud Detection Model — Academic Project

Feb 2025 – Mar 2025

- Built a machine learning model to classify fraudulent financial transactions; performed data preprocessing and feature engineering, and evaluated performance using classification metrics.

Java Inventory Management System — Academic Project

Apr 2024 – Jun 2024

- Developed a modular inventory system in Java applying core object-oriented principles (inheritance, encapsulation) to support real-time data updates, searches, and deletions.

Real-Time AI-Driven Sermon Translation System — Final Year Project

Aug 2025 – Feb 2026

- Building an AI pipeline combining speech recognition and real-time machine translation for live audience displays, with a focus on accuracy and low-latency delivery.

Big Data Visualisation Project — Academic Project
Dec 2025 – Jan 2026

- Analysed a dataset of 85,000+ learner records using Python, applying data-cleaning and visualisation techniques (Matplotlib, Seaborn) to identify engagement patterns.

LEADERSHIP & ORGANISATIONAL EXPERIENCE

General Secretary, Student Representative Council (SRC) — Albukhary International University
Apr 2025 – Present

- Coordinate administrative operations and official documentation for a diverse student body of 500+ international students; manage communication and reporting between students and university leadership.

Event Coordinator, AFSA — Albukhary International University
Oct 2024 – Oct 2025

- Planned and coordinated cultural, academic, and networking events; prepared schedules and documentation and coordinated with vendors, performers, and internal committees.

University Programmes Facilitator & Event Organiser — Albukhary International University
2024 – Present

- Took on operational roles across university events (Master of Ceremony, Stage Manager, Project Manager, Country Supervisor) and volunteered in orientation, graduation, and community programmes.

Founder & Manager, Tina's Specialty — Campus Enterprise
Aug 2024 – Present

- Manage a campus-based food service business alongside full-time studies, handling supply coordination, budgeting, and customer engagement.

EDUCATION

Bachelor of Computer Science (Honours), Data Science — Albukhary International University (AIU), Malaysia
Expected Graduation: November 2026

- CGPA: 3.55 / 4.00
- Dean's List Award: 6 consecutive semesters

CERTIFICATIONS

- Google Cloud Computing Foundations
- Django REST Framework — APIs & Backend Development
- Modern Web Development Workshop Series (Frontend)
